

Through Life Engineering Services (TES) Council

Co-chairs

Steve Gregson
Engineering Fellow – Service System Solutions
Rolls-Royce
E: Stephen.Gregson@Rolls-Royce.com

John Ahmet Erkoyuncu
Professor in Digital Engineering
Cranfield University
E: j.a.erkoyuncu@cranfield.ac.uk

What is Through Life Engineering Services (TES)?

TES is a set of tools and techniques, business thinking and network behaviour that

1. Enables reliable and predictable improvement of value in-use
2. Enables reliable and predictable reduction of cost in-use

for long-life engineering assets

[Click this link to view HVMC TES Video](#)

Value proposition

TES will increase the in-use value and reduce the in-use cost of long life engineered assets to the benefit of the user and provider.

Increase the availability, continuous function and utility to the user

Reduce the burden of long-life engineering assets

Why Through Life Engineering Services (TES)?

Addressing serviceability for the next generation of products requires a holistic, multi-disciplinary approach

TES Council

VISION

‘TES is the dominant global business model for the delivery of long-life assets which maintain a high-value through their operational life-cycle. The UK leads in this competitive market place, which supports its national economic prosperity.’

'Build the ecosystem to ensure that the UK is the natural home for the skills, technologies, supply chain, regulatory and commercial frameworks that will deliver a world-class TES.'

MISSION

TES Framework

TES Council action has resulted in PAS 280 which provides a rigorous framework for TES

TES Lifecycle & value stream interactions

PAS 280 addresses the basic principles behind TES, these are highly aligned with sustainability principles

Where does TES operate?

The TES space - long-life engineering assets

TES in action

Over several decades TES has transformed ownership of assets and risk for aerospace propulsion

Ongoing improvements in technology and business model provision continue to improve value for customers and create new business opportunities for providers

Technology prioritisation in TES

Proposed Design Framework Process

Q1: What is the key problem?

Q2: How to prioritise a number of technologies, able to solve the key problem?

Q4: What is the ROI for implementing each of the proposed technologies?

Q3: What are the proposed solutions?
